Objective

In this challenge, we will learn some basic concepts of C that will get you started with the language. You will need to use the same syntax to read input and write output in many C challenges. As you work through these problems, review the code stubs to learn about reading from stdin and writing to stdout.

Task

This challenge requires you to print $Hello, World!$ on a single line, and then print the already provided input string to stdout. If you are not familiar with C, you may want to read about the printf() command.

Example

$s =$ "Life is beautiful"

The required output is:

```
Hello, World!
Life is beautiful
```

Change Theme Language: C

```c
#include <stdio.h>
#include <string.h>
#include <math.h>
#include <stdlib.h>

int main()
{
    char s[100];
    scanf("%[^\n]%*c", s);

    printf("Hello, World!\n");
    printf("%s", s);

    return 0;
}
```

Line: 15 Col: 2
